1. Number of Parameters, TwitterClient. The constructor has too many parameters. 5 is the max and we have seven
2. Have the maxFollowIdsPerCredentials and maxTrackKeywordsPerCredentials be default values that can be customized later with a setter method.
3. Yes the maximum we have is 10 (in the TwitterClients run method) which is beneath the safe range of 15.
4. 3 independent paths. backOffMilis == 0, backOffMilis > capMilis, backOffMilis < capMilis
5. Efferent coupling refers to the number of other packages that the classes in the package depend upon. Afferent coupling is the number of other packages that depend upon classes within the package.

6. $\dfrac{806}{(928. + 154)} = 74.5\%$

7. $\dfrac{761.}{(948 + 928 + 154 - 806)} = 62.2\%$

8. $\dfrac{(806 + 761 + 1144 + 346 + 267 + 76.)}{(154 + 928 + 948 + 1469 + 12 + 10 + 2)} = 96.5\%$
